

CAD CAM Professional Brian Hengel Lentz

05/26/2019

I have added Brian Hengel Lentz to our mail distribution list. Brian has moved back home to Bonners Ferry after many years living in Texas. He and I went to school together where he was one of the top students, receiving a West Point Appointment in 1966. Brian has been working as a CAD CAM professional and instructor since it was invented.

I have added Brian to the list for his free consulting; and, he has many contacts in our business, the high-tech manufacturing industry. Plus, I have been encouraging him to help local people at the library to get into CAD CAM. Brian lives by himself at Sunrise Trailer Court, in the Yellow Trailer across the road from the US Forest Service, less than a mile from my home.

Last Friday Brian explained to me how NC/CNC can fit with 3D Metal Printing. He is interested in Production 3D Metal Printing, and has his own plastic printer for prototyping. Currently he is designing high tech kiosks for gas pumps, and for fancy mouth pieces for preventing sleep apnea, plus all from his yellow trailer he teaches classes on CAD CAM.

It's nice to have Brian in the neighborhood.
